

Project Management Log number: 2

Student Name	Colin Younge
SRN	16018361
Supervisor Name	Giseli De Sousa
Project Title	Building a conversational agent for a closed domain
Project Management Tool	GitHub

Since the last contact point, I have concluded my research and refined my scope. My project has taken a slightly different direction and I am now focused on producing a conversation agent for email interactions, albeit using the same answer selection style technology.

I have taken the time to do some prototyping, including experimentation with email clients and neural networks using Keras. Moving forward into coming weeks, I will be refining my EPP, submitting my Ethics Approval and bringing my project proposal to my client for approval and further refinement.
